Economic freedom and firm entry–exit decisions

Final-presentation planning file: not a final submission

Gabriel Saco

Status: 11 October 2026

`https://github.com/gsaco/ai-project`

Current position

- The topic proposal and topic deck state the model, FOC, and conditional conjecture.
- A proof outline and illustrative checks exist; complete proofs remain work in progress.
- Lean formalization and the handwritten appendix are not complete.
- Cheap suspension is the first test of the persistence mechanism.

Material to develop for the final presentation

1. Question and result with all conditions; formal model.
2. Proposition with every condition; proof progress and open steps.
3. Simulations: what each verifies and what it cannot establish.
4. Actual Lean statement and proof fragment, matching the paper.
5. My hand derivation and assessment of an AI contribution.
6. Two or three specific questions for class critique.
